

UPDATE FOR INSTALLING NI-VXI FOR MICROSOFT WINDOWS

Thank you for buying a VXI controller and the NI-VXI software from National Instruments. These release notes contain information regarding how to install the NI-VXI software for Windows.

National Instruments is now using the latest installer endorsed by Microsoft Corporation, InstallShield from Stirling Technology, for installing the NI-VXI software. The documentation that came with your kit does not reflect this change, but is still accurate for other information, such as installing the hardware and configuring and using the hardware and software.

The new installer from Microsoft is very easy to use. Run the Setup program, `setup.exe`, which interactively guides you with a series of prompts that will help you complete your installation.
